## CLEAN AIR AND SUSTAINABILITY DIVISION

### Hot Issues:

**Limetree Bay Terminal (LBT)** On Feb. 26, Air Programs Branch and LBT modelers discussed the progress of the EJ analysis associated with LBT's PAL permit. One of the main issues from the last call was largely resolved. That is, they agreed to place modeling receptors both off property and in the EJ locations defined in Region 2's Interim EJ Policy tool. We also agreed that they could use a lower In-Stack-NOx/NO2 Ratio than the default ratio found in the model. This is because LBT has some measured ratios to support this. Deliberative Process / Ex. 5

Deliberative Process / Ex. 5 LBT claims that they only have limited continuous emissions monitoring (CEM) or fuel use data. Both LBT and APB will explore the best method for arriving at this short-term limit. We agreed that LBT would email us a proposed procedure just on the short-term emission rate while they work on the protocol to expedite the process. The protocol is expected in 4 weeks.
